

## Part I - Review Questions

1. What version of Illustrator are you using and what platform do you run it on (Mac or Windows)? **CS4 on Windows XP**
2. Of the colors listed below:  
RGB/CMYK
  - Which is most commonly used for printed work? **CMYK**
  - Which is most commonly used for web-related work? **RGB**
3. What's the difference between opening a graphic and placing one? **Opening opens the graphic as a new file. Placing places and links the graphic into a new file to be positioned. .**
4. How do you get the guidelines to appear? **With rulers on, click and drag mouse from rulers to the art board.** How would you use them? **To align objects on the art board. Guides also do not print and are visual aides only.**
5. What do you use to "nudge" your object? **Using the arrow keys with the selection tool selected.**
6. How would you export your drawing as a raster graphic for use on the web? **File->Save for Web Devices.**

## Part II - Looking Around

- Draw a rectangle - it may be filled or unfilled, but give it a stroke outline.
- Once the rectangle has been created, leave it selected and visit each menu (File, Edit, etc) and see what options are available on those menus. Take a look at all the palettes that are available from the View and Windows menu options. Tell me:
  1. Two options you find on the View menu. **Zoom in, Zoom out.**
  2. Three palettes you can open from the Window menu. **Stroke,Color,Layers**
