**LEFT FOOT XRAY REPORT**

**CLINICAL HISTORY**

Pain and discomfort in left foot.

**COMPARISON**

None available

**RADIOGRAPHIC FINDINGS**

There are degenerative changes in the DIP joints, first MTP joint as well as the joint the midfoot. This is manifested by joint space narrowing, subchondral sclerosis and osteophytosis. There is a well-corticated osseous fragment along the base of the fifth metatarsal, either in keeping with an unfused ossicle or sequela of remote trauma. No fractures are detected. There are no aggressive osseous lesions. There is no heel spur.

**INTERPRETATION**

Mild osteoarthritic changes.
